What is XDOG?

In short: on XLAYER, XDOG is what SHIB is on Ethereum and what WIF is on Solana.

The Birth of XDOG:

XDOG is the very first fairly launched meme coin on XLAYER. It was officially issued on August 13, 2025 (UTC) by the developer team of DYORSWAP on XLAYER.

Meaning of the XDOG:

“X” stands for both OKX and XLAYER. “DOG” represents man’s best friend — the dog — and continues the meme spirit of DOGE, SHIB, and other iconic meme coins. Combined, they form XDOG.

Early Development:

From the moment XDOG was born, it was destined to be extraordinary. As the “Dragon One” on XLAYER, XDOG went viral immediately on the same day XLAYER announced its upgrade. Within just two to three days, its market cap skyrocketed to \$16M, and as of now, it holds around \$9M.

Community expansion highlights:

- Telegram: **12,500** members
- QQ/WeChat: **2,000** members

- OKX Community: **800** members
- X (Twitter): **1,800** followers (plus **1,200** on legacy account)

Why XDOG?

XDOG originates at the right timing: Bitcoin is currently priced at \$110,000 per coin, and ETH is trading at \$4,500 per coin, both at historically high levels with strong upward momentum. The majority consider this period a bull market for the Web3 industry. Globally, countries are increasingly relaxing regulations and demonstrating unprecedented commitment to public blockchain development. The market generally holds a positive outlook for projects integrating Web3 with AI, DePIN, DeFi, and RWA.

XDOG leverages geographical advantage: OKB has been burned down to 21 million tokens, the XLAYER mainnet has been upgraded, and OKEx boasts hundreds of millions of users with a determined plan to go public in the U.S.

XDOG thrives on community cohesion: The community is highly decentralized, not controlled by any conspiratorial groups, market manipulators, or KOLs. It is extremely active, with over 5,000 members online daily, and possesses boundless creativity. The community operates with a high degree of autonomy; from the initial XDOG CTO founding team to the present, multiple waves of builder teams have succeeded one another, now forming an emerging and structured organizational framework.

This whitepaper is our first “XDOG Consensus Manual.”

Therefore, if you believe XDOG deserves to be seen by more people, if you resonate with its grand narrative, and if you think it can leave a significant mark in the development of the Web3 industry and be remembered by future generations, then please help spread it so that more people can see it.

Chapter 1: XLAYER and XDOG

Overview of XLAYER

X Layer is a high-speed zkEVM validium chain built on Ethereum Layer 2, offering 5,000 TPS throughput and near-zero gas fees. It seamlessly supports public chains built on the Ethereum commercial ecosystem, serving as both an “operating system” and a “growth engine.” Using OKB as its sole gas token, it integrates 60 million exchange users and \$22 billion in custodial assets onto the chain, creating a natural traffic moat. With its built-in OAK compliance channel, X Layer proactively paves the regulatory path for RWA, ETFs, and fiat gateways, laying the foundation for a regulation-friendly infrastructure.

Figure: XLAYER Ecosystem Model

XLayer Ecosystem Outlook

Through zero-gas withdrawals, one-click cross-chain operations, and dedicated X Layer zones, project teams can efficiently complete the full cycle of “token issuance – listing – market making” within 24 hours. At the same time, OKX Pay uses X Layer as its underlying settlement network, allowing both red packets and merchant payments to be made with OKB. Leveraging the Polygon CDK technology framework and a \$50 million ecosystem fund, X Layer continuously attracts developers to co-build the ecosystem, share liquidity rewards, and accelerate the explosive growth of DeFi, GameFi, and NFT sectors. Traditional financial institutions can also take advantage of its low-gas, highly compliant features to issue real-world assets (RWA) such as U.S. Treasury bonds and carbon credits, continuously attracting external capital. OKX’s CEO announced a \$100 million fund to support ecosystem and application development on X Layer.

In short, without X Layer, OKX is merely a centralized exchange; with X Layer, OKX is building all the core components to become a foundational infrastructure of the crypto world, moving toward a broader ecological landscape.

XDOG Token Information

Contract Address: 0x0cc24c51bf89c00c5affbfcf5e856c25ecbdb48e

Total Supply: 1 billion tokens

Buy/Sell Tax: 0.00%

Permission Status: Project permissions have been renounced; the team cannot manipulate the token or liquidity pool.

Liquidity Pool: Locked in an inaccessible address, ensuring full decentralization and security.

Contract Analysis: No risk items or warnings detected. The contract contains no malicious code, no self-destruct functions, no proxy contracts, no minting mechanisms, no whitelists, no transaction termination functions, and no blacklists.

XDOG's vision is to establish itself as a flagship cultural token and community gateway on X Layer, attracting a large user base into the X Layer ecosystem. Once it gains mainstream recognition, XDOG aims to become one of the representative meme coins in the blockchain space.

Chapter 2: The Community Strength and Consensus of XDOG

Current XDOG Community Information:

XDOG Whale Community: Details available via Telegram groups

The Community Strength of XDOG:

The XDOG community is remarkable,

as evidenced by several major events——

1. The \$1 Billion Safety Net Plan

On August 21, 2025, when XAYER was thrown into chaos by founders manipulating the market, a prominent figure named Buzi posted an article on Twitter initiating the XDOG \$1 billion safety net plan. The main content was as follows:

"To support the X Layer ecosystem and the \$XDOG community, Buzi initially allocated 2,100 OKB to establish the \$XDOG Community Stabilization Fund and launched the #XDOG\$1B Plan, with the following purposes:

1. *Purchase 100 million \$XDOG at a price of 10,000 \$XDOG = 0.21 OKB.*
2. *For every 0.21 OKB increase in \$XDOG price, the stabilization fund will sell 1 million \$XDOG (the first sale valued at ~21 OKB). The sold \$XDOG will be simultaneously burned, while the OKB proceeds are retained in the fund as value backing.*
3. *The fund may adjust the backing price as needed.*
4. *If \$XDOG does not reach the sale price, all purchased \$XDOG will be permanently locked.*
5. *If the fund completes the purchase of 100 million \$XDOG and runs out of capital, it will be replenished again.*
6. *This fund plan remains effective until \$XDOG reaches a market capitalization of \$1 billion.*
7. *The fund will regularly disclose buyback and burn records; real fund address: 0xfd0f7d8a9fc80d5c83241182582aff915cba7fab.*

2. Collective Exchange Locking Event

On the night of August 20, 2025, when XDOG's price sharply dropped, a large holder initiated the “lock before listing” action—refusing to sell unless listed on an exchange. 500,000 XDOG were directly transferred to the OKX exchange address (accessible only after listing; otherwise, the address acts like a black hole). The move quickly gained traction, with community members contributing amounts ranging from hundreds to hundreds of thousands of XDOG. This

collective action drew widespread attention, demonstrating the community's cohesion and embodying the meme spirit.

3. Joining of Influential KOLs

As well-known global blockchain figures, including BULL_BNB, joined, the community continued to grow and gained international momentum, attracting more on-chain participants to XLAYER. BULL even changed his long-standing name from BULL.BNB to BULL.OKX to continuously build XLAYER, inspiring and motivating the community greatly.

4. Community Activity and Collective Consensus

Since its inception, the XDOG Telegram community has been active 24/7, full of vitality. Members are drawn to XDOG's identity, grand narrative, and are willing to contribute to XLAYER's development. After a price drop and departure of some early administrators, a manager named "Umbrella Company" took responsibility during a critical moment. Together with other dedicated community members, they reorganized the XDOG community structure. In a short period, they achieved consensus among all community members, including major holders, stabilizing both the token price and community morale, significantly enhancing cohesion.

The Meme Identity of XDOG:

Early XDOG Avatar

XDOG's MEME Identity

Currently, XDOG's avatar and visual identity are undergoing a unified upgrade. We aim to create a more "MEME-like" image to facilitate

XDOG's dissemination, support IP development, produce cultural merchandise (such as T-shirts, hats, and figurines), and plan applications including XDOG NFTs and DeFi projects.

XDOG Consensus Declaration:

We do not merely hold XDOG; we share a belief, a story, and a sense of identity. Our consensus is not built on complex whitepaper formulas or empty promises from founders. It is born from every XLAYER milestone, every meme share, every community joke, and every moment of resonance asking, “*Do you believe too?*” It represents the purest tribal culture of the digital age—a digital faith woven from emotion, humor, and collective narrative.

Here, the community is the soul. Token prices may fluctuate, charts may blink, but the stories and mutual understanding guarded by thousands will not fade easily. We understand that true value lies not in how much money is recorded on-chain, but in how many minds are excited by the same idea and united by the same XDOG symbol.

We may come from all corners of the world, but we become “*us*” because we love XDOG. We do not trust manipulators or KOLs, but we trust each other; we do not idolize authority, but we believe in narratives written by ourselves.

This is the consensus of XDOG——

Fragile, yet sincere;

Absurd, yet free;

Accidental, yet potentially game-changing.

Because we believe in XLAYER, it exists.

Because we spread XDOG, it grows strong.

Chapter 3: The Application Outlook of XDOG

Ecosystem and Utility Value:

The value of XDOG lies not only in its culture but also in its growing utility. Currently, the project team has several major concepts, which will ultimately be decided by community consensus:

- 1. Staking to Earn / Play to Earn:** The team will launch an ERC4626 vault, allowing users to deposit XDOG or liquidity pool (LP) tokens and receive Vault Share Tokens representing their ownership stake. The team will also add a certain amount of XDOG or LP tokens to the vault to increase the value of Share Tokens, incentivizing users to hold XDOG or provide liquidity, thereby strengthening XDOG's stability. Holders can stake their XDOG to earn additional XDOG or tokens from partner projects. GameFi applications may also be developed, where holders use XDOG as entry tickets to participate.
- 2. XDOG NFT:** A series of XDOG NFTs will be released to represent on-chain identities within X Layer, attracting users to participate in on-chain social activities and events. The popularity of XDOG NFTs will also stimulate the on-chain NFT market, laying a solid foundation for future unique digital assets and RWA on-chain integration.
- 3. X Layer Ecosystem Foundation:** As one of the early notable projects on X Layer, XDOG will collaborate with other outstanding on-chain DeFi and GameFi projects to provide holders with exclusive airdrops, whitelists, and early access. Early-stage X Layer projects may receive funding support, and after launch, XDOG will assist in promotion to help projects take root and thrive on

X Layer. Additionally, RWA-related applications can be developed, creating hybrid virtual-real foundations that integrate areas such as animal protection, physical asset allocation, and product development.

ROADMAP:

Phase 1: Foundation (Q4 2025)

- Grow the community to 50,000 members (Telegram, X)
- Develop and audit applications
- Initial marketing and collaboration with key influencers
- Launch on OKX ALPHA and continue building XLAYER

Phase 2: Growth (Q1 2026)

- Host offline community events with 10,000 participants and launch a community governance DAO, returning decision-making power to the community
- Issue NFTs and launch Staking applications
- List on major CEX exchanges
- Establish an RWA Foundation and develop RWA applications
- Form strategic partnerships with other major projects on X Layer

Final Words

Community=Everything

社区=一切

This whitepaper is only version 1.0; it is not perfect, but it takes a crucial first step—explaining the full story of XDOG:

Where did we originate? What are we now? Where are we heading?

XDOG represents not only XLAYER’s “Dragon One” but also the tremendous power of the community.

As the largest community currently on XLAYER, we have the responsibility to build the ecosystem, share our story with more people, and contribute to the community.

XDOG is destined to leave its mark in Web3 history!
